

Networking: How does one join the workgroup '{avatar_a}-WG'?

- Make sure the hostname of the machine trying to join the domain is unique.
 - If it is a recently deployed machine change it's hostname (preferably to it's name in {avatar_b}).
 - Restart the machine.
- To join the Workgroup {avatar_a}-WG,
 - Right click on 'My Computer'.
 - Select 'Options'.
 - Navigate to the 'Computer Name' tab.
 - Click on 'Change' button.
 - Change the existing WORKGROUP to {avatar_a}-WG.
 - Save your changes.
- Restart the machine for changes to take effect.

Unique solution ID: #1012
