

General: How can one join windows7 machine to samba domain controller ?

Steps to join windows7 machine to samba domain controller.

1. Download and run the attached reg file as admin. (reg file is already attached to this FAQ)
2. Restart machine
3. Join the machine to {avatar_b} Workgroup
4. Restart
5. Login as {avatar_b} user.

Read the following link <http://wiki.samba.org/index.php/Windows7> for more details

Note: Do **not** edit any other registry parameters (NETLOGON).
