User management: What are meaning of the terms used in license info ?

The meaning of the terms used in license deatils are as follows:

1. Max running machines ==> It implies that, maxium number of deployed machines that are allowed to be in running state is equal to or less than the "Max running machines" number and not more than that number (But here '0' (zero) is for unlimited).

2. Max deployments ==> It implies that, maxium number of machines that are allowed to deploy is equal to or less than the "Max deployments" number and not more than that number (But here '0' (zero) is for unlimited).

3. Max active users ==> It implies that, maxium number of active users that are allowed to be active (logged in) at a particular time is equal to or less than the "Max active users" number and not more than that number (But here '0' (zero) is for unlimited).

4. Max concurrent users ==> It implies that, maxium number of concurrent users that are allowed to be active (logged in) at a particular time is equal to or less than the "Max concurrent users" number and not more than that number (But here '0' (zero) is for unlimited).

5. Grace period left ==> It means that, maximum allowed number of consecutive days license can be violated. This period is reset once the license usage returns to limit.

6. license_elasticity ==> It means that, maxium tolerance of overuse of resources in percentage [10,20 or 30.]
