

Networking: How do I access the shared home directory?

Accessing the shared home directory is involves joining a workgroup and using the work group credentials.

- Just after deployment start your machine and grab the console.
- For the first time around you will need your Administrator's help (for the password) to login into your machine.
- Now [join the workgroup '{avatar_a}-WG'](#). After registering, restart the machine.
- Now login using your {avatar_c} credentials and "**My Documents**" is now your shared home directory.
