

Networking: What prevents me from opening a VPN connection for support?

Before opening a VPN connection for support you need to obtain a password by calling {avatar_b} support by phone. If after obtaining the password you are still unable to connect check

- if {avatar_b} server has access to internet.
- if access to internet is through a HTTP proxy, make sure the proxy is working.
- Also ensure that the HTTP proxy port has not changed since {avatar_b} server was installed.
