# Installation: How does one install a thin client ?

**Installing a "thin client"**

Configuring a physical machine as a thin-client on the {avatar_b}™ {edition_name} network involves installing the thin-client software packages on the physical host.

**Hardware requirements**

> PCs with >512MB of RAM and >10GB of hard disk space and a network interface card.

**Here are** the steps to be followed for the installation.

1. Prepare the physical machine for installation.
2. Install {avatar_b}™ software on the host.
3. wget http://{avatar_c}-server/install.sh
4. bash ./install.sh -s {avatar_c}-server -t.

*Note: "{avatar_c}-server" is the host name of the machine in which {avatar_b}™ server has been installed. Replace it as appropriate for your site.
