

General: What can a teacher do with a lab management software?

Enable teachers to benefit from technology

Course content sharing - Given the paucity of good teachers, wouldn't it be great to enable a teacher to reach out beyond the four walls of a classroom in a scalable way?

Demo mode - Wouldn't it be nice to be able to demonstrate something clever a student has done without the need for a projector? Wouldn't it be nice to share an example with every student?

Inspect live assignments rather than pore over assignment report, wouldn't it be nice to simply run the assignment and try it out yourself?

Detailed audit reports - Is there a point to having faculty take attendance at a lab? Wouldn't it be simple enough to generate a report automatically based on activity?
