

# Screen Display: How to make my Console go full screen?

Toggleing between **fullscreen** and **normal display** modes is done as follows ...

- If the console viewer shows the **Java icon** then activate the keypad enhancer followed by **Alt+F11**.
- If the console viewer shows **vnc** on title bar then activate the keypad enhancer and click on the **FullScreen** On/Off button.
- If the console viewer shows **spicec** on title bar then press **Shift+F11**. Note that the keypad enhancer is not required.

(For best results, ensure that the machine screen resolution matches the thinclient screen resolution.)
